

Am I Immune From A Second HSV Infection?

Immunity from a 2nd HSV type depends upon your antibody response.

HSV: Shared DNA

■ Shared DNA ■ Unique to HSV-1 ■ Unique to HSV-2

If your immune system responds to only the unique DNA, you'll have no resistance to a 2nd H-type.

If your immune system responds to some of each, you'll have partial resistance to a 2nd H-type.

If your immune system responds to only the matching DNA, you'll have much resistance to a 2nd H-type.
